

# REASONS TO SPAY/NEUTER YOUR PET

- **Spay/Neuter surgery removes reproductive organs that often cause dogs and cats to have medical problems later in life.**
- **Neutered males won't develop prostate problems or testicular cancer.**
- **Spaying reduces the risk that a female dog or cat will suffer from mammary tumors and uterine cancer.**
- **Altered dogs and cats are generally less aggressive, more relaxed, have fewer behavioral problems and are less likely to roam since they are not driven to mate.**
- **Neutered dogs are less likely to urinate in the house.**
- **Neutered cats are less inclined to spray.**
- **Spaying/Neutering saves lives by preventing unwanted litters and homeless animals.**
